Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Platform: ServiceNow

Project Type: Group Project / ServiceNow System Administration

1. Project Overview

The Standard Laptop Task Flow automates the creation of a Catalog Task for Standard Laptop requests. Once the request reaches the configured approval condition, the flow creates a task under the related Requested Item and assigns it to the Hardware assignment group for laptop configuration.

2. Purpose

The purpose of this project is to reduce manual task creation, improve processing speed, and ensure approved laptop requests are automatically routed to the appropriate hardware team.

3. Main Flow

Step	Process
1	User submits a Standard Laptop request through the Service Catalog.
2	The request goes through the configured approval condition.
3	Flow Designer detects the approved request.
4	A Catalog Task is created under the related Requested Item.
5	The task is assigned to the Hardware assignment group.
6	Hardware team processes the laptop configuration task.

4. Milestones

Milestone 1 – Flow: Create a Flow to create a Catalog Task after approval and assign it to the Hardware group.

Milestone 2 – Flow Assignment: Configure the assignment and task-routing details.

Milestone 3 – Service Catalog: Configure and validate the Standard Laptop request through the Service Catalog.

Conclusion: The automation helps streamline standard laptop procurement by reducing manual work and automatically routing approved requests to the appropriate team.
